Embedding EasyTerritory within Dynamics 365 iFrame

Installing the Managed Solution · https://www.easyterritory.com/documentation/dynamics-365-managed-solution/installing-the-managed-solution/crm-easyterritory-iframe/

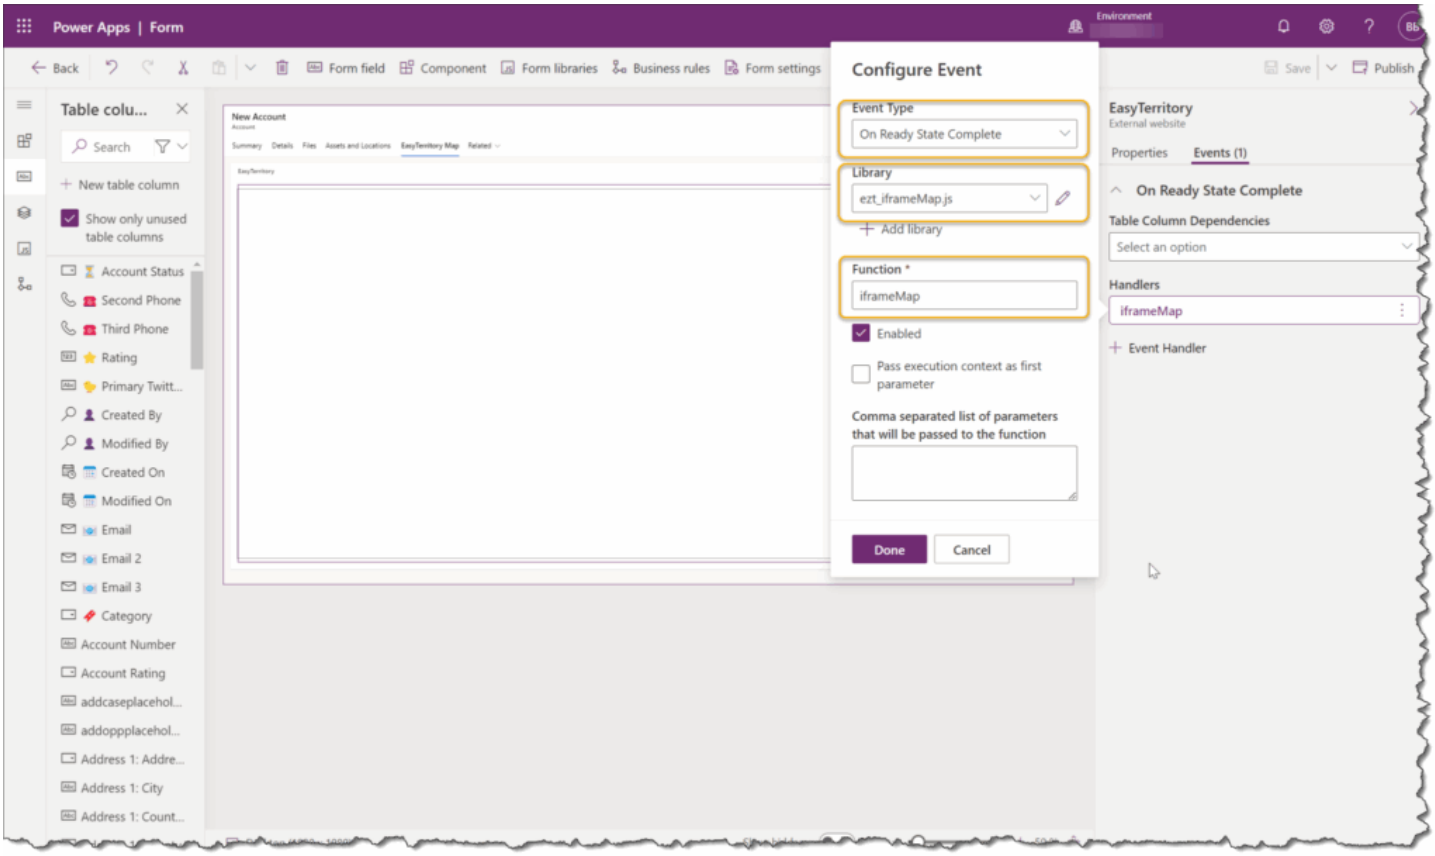

The EZT IFRAME function allows you to load an EasyTerritory map as an iFrame on a form. This iFrame will dynamically zoom to the record's latitude and longitude specified on the form.

To configure this feature into your Dynamics 365 forms, follow these easy steps:

- Download and import the EasyTerritory Unmanaged Solution for Dynamics 365 from Microsoft AppSource.
- Register for a trial of EasyTerritory Enterprise.
- In Dynamics 365 customization section or in Power Apps portal, navigate to the entity you'd like to embedded the EasyTerritory map on.
- Add an iFrame/External Website to your page.
- In the Properties section, specify unique name as: IFRAME_**EasyTerritory**
- Specify URL as:
- https://apps.www.easyterritory.com/**EasyTerritory instance id**/app/index.html?projectId=**project id**&Lat=**address1_latitude**&Lon=**address1_longitude**
- Add your EasyTerritory **instance id**, and **project id** into the URL. Lastly define the fields on the form you would like to map on the Iframe. For, instance if you would like to map the fields ' **address1_latitude**' and '**address1_longitude'** you would specify that after the **&Lat=** and **&Lon=** respectfully in the URL.
- For customers using Azure Active Directory, include the following URL parameter at the end of the EasyTerritory URL:
  &useAdalPopup=true
- Specify Label as: EasyTerritory

- In the ‘iFrame Properties’ window click the ‘Events’ tab.
- In ‘Form Libraries’ add ezt_iframeMap.js
- In ‘Event Handlers’ add the Event: ‘OnReadyStateComplete’
- Then click the ‘Add’ icon and in the ‘Handler Properties’ pop-up window type the function: ‘iframeMap’. Make sure you check ‘Enabled’. Finally, press ‘OK’.
- Before finishing, click ‘Save’ and ‘Publish’ to enable this feature on your forms.
